

GAI-6

Supplement for Dubieties

Diabetes is a metabolic disorder, and can be controlled by right supplementation. GAI-6 is supplement as a supported therapy for both the type of diabetes that is type I and type II.

GAI-6 means Glucose Absorbtion Inhabitor. It is a supplement which controls blood glucose by Inhibiting absorbtion of blood glucose from intestine or helps in increasing Insulin Secretion from pancreas.

Ingredients

- **Salacia reticulata (Saptranga)** has a role in Ayurveda as an anti-diabetic herb.
- **Swertia Chirata- (Chirayata)** Swertia Chirata is known as Chirayata in India. It stimulates insulin production in pancreatic cells thus lowering blood sugar naturally.
- **Fenugreek (Methi)**, there is Galactomannan, a natural soluble fibre slows down the rate of sugar absorption into blood also contains amino acid responsible for inducing the production of insulin.
- **Gymnema sylvestre (Gudmar)** in GAI-6 helps regulate blood sugar by blocking the absorption of sugar in the ntestines and stimulating insulin release from the pancreas. It may boost the body's ability to produce insulin on its own by regenerating beta cells.
- **Jamun** seeds lowers blood sugar levels by 30%..Jamun converts sugar into energy.
- **Neem** in GAI-6 contains chemicals that reduces blood sugar levels.
- **Karela** is known to be highly beneficial for diabetics owing to the two very essential compounds called charatin and momordicin that are the key compounds in lowering blood sugar levels.
